

RED TEAMING & WAR GAMES

are essentially simulative techniques for real life situations meant to drill the Client or put his strategy/tactical concept/capability/defence or technology to a test while providing a closer look and better understanding of the threat.

Red Team methodology is a multi-staged process placing the client in a spectator position and shifting his sights onto the adversary. It provides the client with a unique vantage point “behind enemy lines”, enabling him to monitor the inner workings of a Jihadi terrorist organization preparing an attack on his assets.

This methodology may also incorporate a live dimension whereby the Team simulating the opposition actually mounts an early silent field reconnaissance operation on a given target or arena without notifying the defending party thus testing it under totally realistic circumstances.

The info thus independently collected from a variety of open sources and the field is then utilized by the Red Team for considering several attack modes out of which one is finally transformed into an operational plan.

Target selection, intelligence evaluation and planning stages are transparent to the client who can closely observe and monitor them in order to obtain an intimate insight as to how does a given terrorist organization function in terms of its fundamental mind set, ideological and operational considerations, decision making process and the final formulation of an MO.

This methodology does not normally involve a dry run of a selected operational scenario on a given target.

Red Team methodology can be applied to a wide range of diversified targets and arenas.

War Games usually involve two inter-acting parties both playing given roles under strict laboratory conditions whereby one is always the Client playing himself and us being the terrorist hostiles.

In the context of Counter-Terrorism this methodology can be useful in simulating Crisis Management situations before, during or after a “hostile terrorist operation” and is normally meant for G. clients from the Intelligence, Law Enforcement and Homeland Security communities.

CTS/ICT team of experts brings to the table a unique blend of extensive operational experience in intelligence clandestine struggle against terrorist organizations and tactical battlefield Counter-Terrorism, coupled with a day to day applied research by first class analysts. It enjoys an unparalleled and intimate understanding of the opposition role in both culture and operations.

These services were already successfully provided to a number of western intelligence and security agencies.
